

Raidr Multiplayer Events (V1) – Functional Planning Document

Objective

Allow merchants to create live location-based events where players travel to a single real-world location and compete to claim rewards.

This document covers:

- Mobile App (Player Side)
 - Merchant Dashboard
 - Admin Panel
 - Backend Requirements
-

1. Core Event Concept

An Event (Raid) is a live activity created by a merchant.

Example:

Merchant:
Cheezious

Event Title:
Free Pizza Raid

Location:
Cheezious F-6 Branch

Reward:
Free Pizza Voucher

Reward Quantity:
100

Start Time:
7:00 PM

Event Type:
Single Location Event

Players travel to the event location and attempt to claim the reward before the event ends or inventory runs out.

2. Event Structure

For V1, every event contains:

- Event ID
 - Event Title
 - Event Description
 - Merchant
 - Merchant Avatar (Commander Avatar)
 - Event Image / Reward Image
 - Latitude
 - Longitude
 - Start Time
 - End Time
 - Reward
 - Reward Quantity
 - Event Status
-

3. Event Statuses

Draft

Merchant is creating the event.

Pending Approval

Waiting for Admin approval.

Scheduled

Approved and waiting for start time.

Live

Event is active.

Completed

Event finished.

Cancelled

Event cancelled.

4. Player Mobile App

Event Discovery Screen

Player can view:

- Upcoming Events
- Live Events
- Nearby Events

Each card displays:

- Event Image
 - Event Title
 - Reward
 - Distance
 - Start Time
 - Rewards Available
-

Event Details Screen

Displays:

- Event Image
 - Reward Information
 - Merchant Name
 - Commander Avatar
 - Event Time
 - Event Location
 - Join Button
-

Join Event

Players can join any Live Event.

There is no participant limit for joining the event.

When a player joins:

- The player is added to the event participants list.
- The player can view the event on the map.
- The player can travel to the event location.

Rewards are limited by the Reward Quantity defined by the merchant.

Example:

- 1,000 players join the event.
- Only 100 rewards are available.

The first 100 eligible players who successfully claim the reward receive it.

Once all rewards have been claimed:

- The event remains visible until it ends.
- No additional rewards can be claimed.

Live Event Screen

Displays:

- Map
- Event Location Marker
- Player Location
- Countdown Timer
- Rewards Remaining
- Commander Messages

Example Messages:

"Welcome to the Raid"

"20 rewards remaining"

"Only 5 minutes left"

Reward Claim

When player reaches required radius.

Example:

20 meters

Player can click Claim Reward.

Backend validates:

- User location
- Event status
- Reward availability

If valid:

- Reward is assigned
 - XP is awarded
 - Reward inventory decreases
-

Event Completion

Player sees:

- Reward Earned
 - XP Earned
 - Event Summary
-

5. Merchant Dashboard

Merchant Profile

Merchant can manage:

- Business Name
- Business Logo
- Commander Avatar

Default Commander Avatar is used for all events unless changed.

Create Event

Merchant enters:

- Event Title
- Description

- Location
- Reward
- Reward Quantity
- Start Time
- End Time
- Event Image

Optional:

- Custom Commander Avatar

AI Event Creation

Merchant enters:

"Create a pizza raid for 100 people at 7 PM"

AI generates event details.

Merchant reviews before publishing.

Event Preview

Merchant reviews:

- Event Information
 - Reward Information
 - Location
 - Commander Avatar
-

Submit Event

System checks:

- Available Credits
- Radius Conflict
- Event Validation

If valid:

Event submitted.

Event Management

Merchant can:

- View Events
 - Edit Draft Events
 - Cancel Scheduled Events
 - View Participant Counts
 - View Winners
-

6. Credits System

Every event consumes credits.

Example:

Small Event:
10 Credits

Medium Event:
25 Credits

Large Event:
50 Credits

Merchant must have enough credits before submission.

7. Admin Panel

Event Review

Admin can:

- View Pending Events
 - Approve Events
 - Reject Events
-

Merchant Management

Admin can:

- View Merchants
 - Suspend Merchants
 - Adjust Credits
-

Event Monitoring

Admin can:

- View Scheduled Events
 - View Live Events
 - View Completed Events
-

Radius Protection

System checks a 500-meter radius.

If another event already exists within the same area and overlapping time period:

- New event is rejected

This prevents map spam and overcrowding.

8. Commander Avatar (V1)

Commander Avatar is the event host.

For V1:

- Image only
- Text messages

Examples:

- Cheezious Chef Avatar
- Business Logo
- Brand Character
- Merchant Mascot

Messages may come from predefined templates.

Examples:

"Welcome to the Raid"

"Rewards are running out"

"Only 5 minutes remaining"

9. Backend Requirements

Node.js Backend Responsibilities:

- Create Event
 - Update Event
 - Delete Event
 - Join Event
 - Claim Reward
 - Credit Validation
 - Radius Validation
 - Event Scheduling
 - Push Notifications
 - WebSocket Events
 - Reward Inventory Management
-

10. Real-Time Features

Using WebSockets:

- Event Started
 - Event Ended
 - New Participant Joined
 - Reward Claimed
 - Reward Inventory Updated
-

11. Push Notifications

Examples:

"Pizza Raid starts in 10 minutes"

"Raid is now live"

"Only 5 rewards remaining"

"Event ending soon"
